

Field Officer II

Agriculture, Fisheries and Conservation Department

.....

PANG YIK TUNG

Associate of Science in Environmental Studies
Graduated in 2015

Yik Tung completed the Associate of Science in Environmental Studies in 2015. The well-designed curriculum has provided a fundamental knowledge on environmental science. Not only has the associate degree programme equipped her with basic environmental knowledge, but it has also helped her gradually build a keen interest and passion towards environmental conservation. During her studies, she was proactive in enhancing her knowledge by participating in various activities such as environment-related visits, field trips and internship, etc. All these valuable experiences have helped broaden her horizons and better prepare her for the workplace.

After completing her associate degree, Yik Tung followed with further undergraduate studies in the natural sciences at the Chinese University of Hong Kong. During her study, she focused on studying biological sciences which has helped her to learn and analyse in depth the interactions between human and the environment.

Currently, Yik Tung works as Field Officer in the Country Parks Ranger Services Division of the Agriculture, Fisheries and Conservation Department. Her duties are to protect the country parks through law enforcement, lead guided tours and handle complaints from the public. She has ample opportunities in her job to apply the knowledge and skills learnt in the College, and she enjoys very much to work in the nature, where she finds meaning in her life as she does her part in sustaining and protecting our valuable environment in Hong Kong.
